Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Source-threshold review rate

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

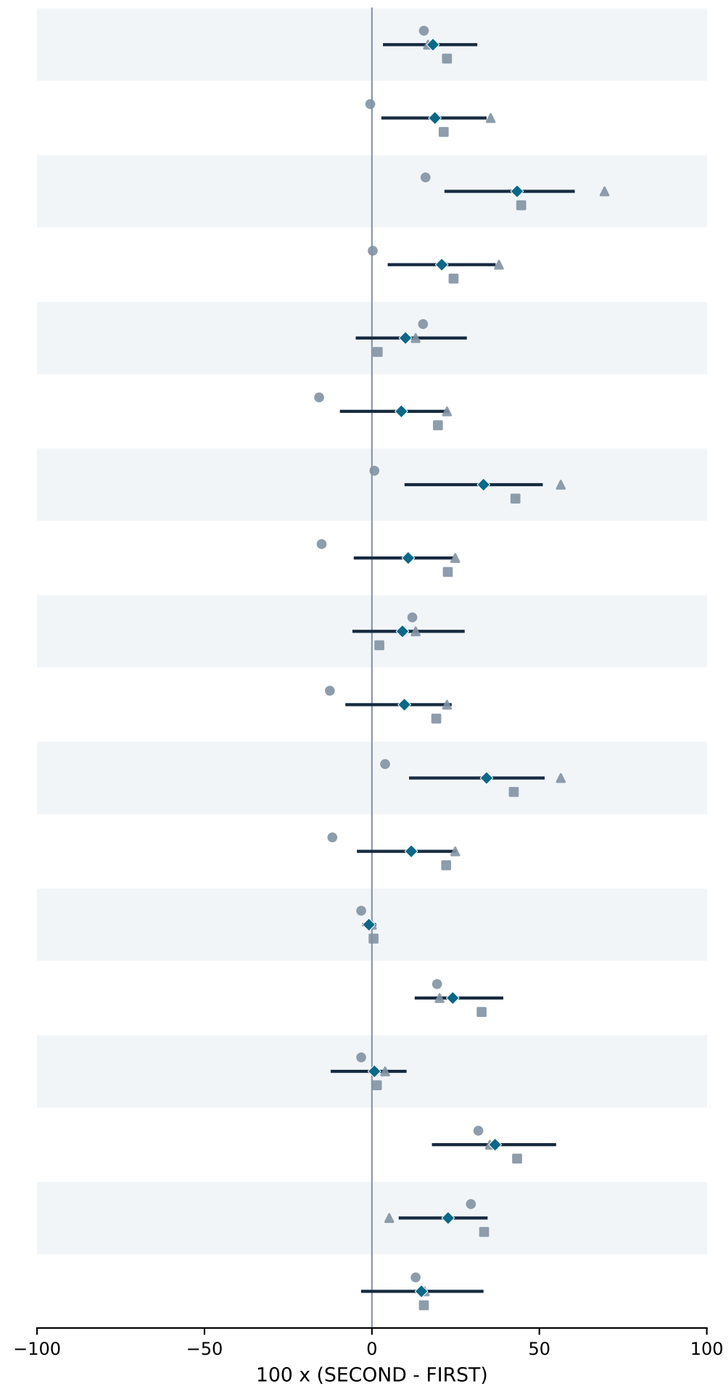

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

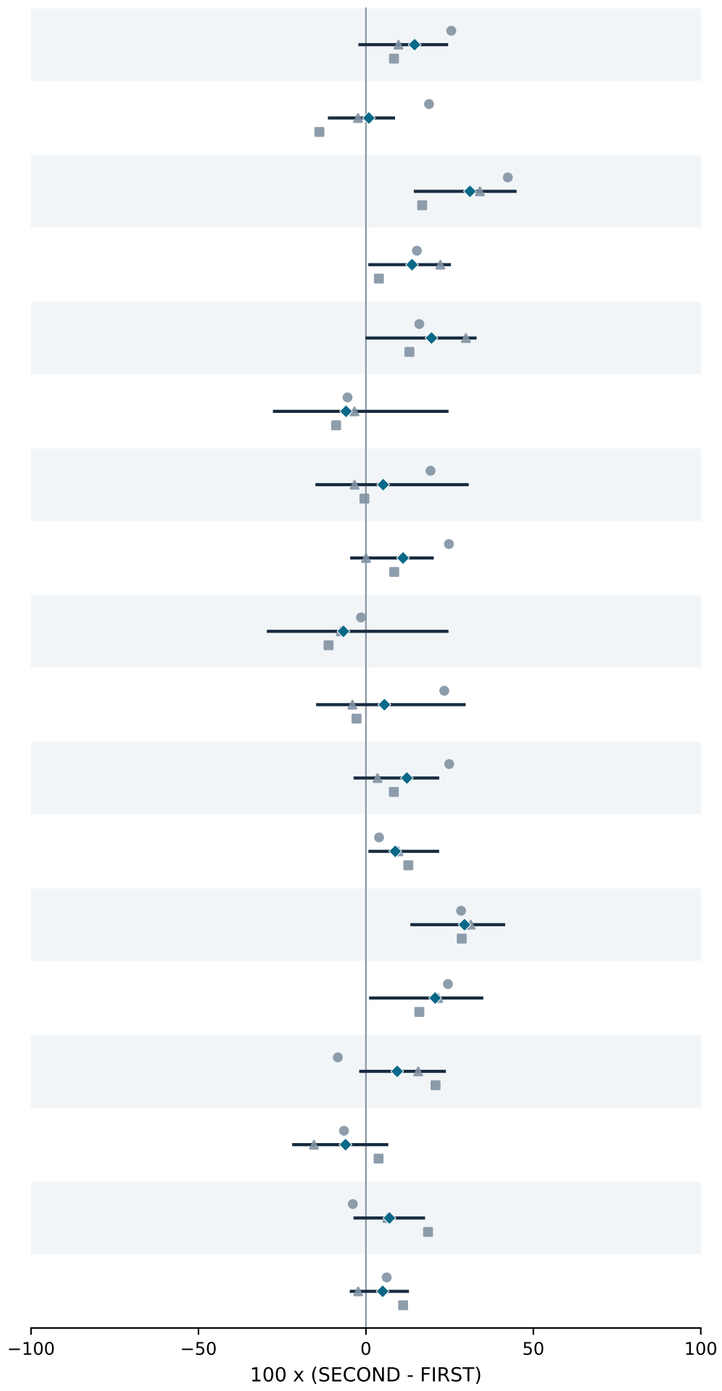

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

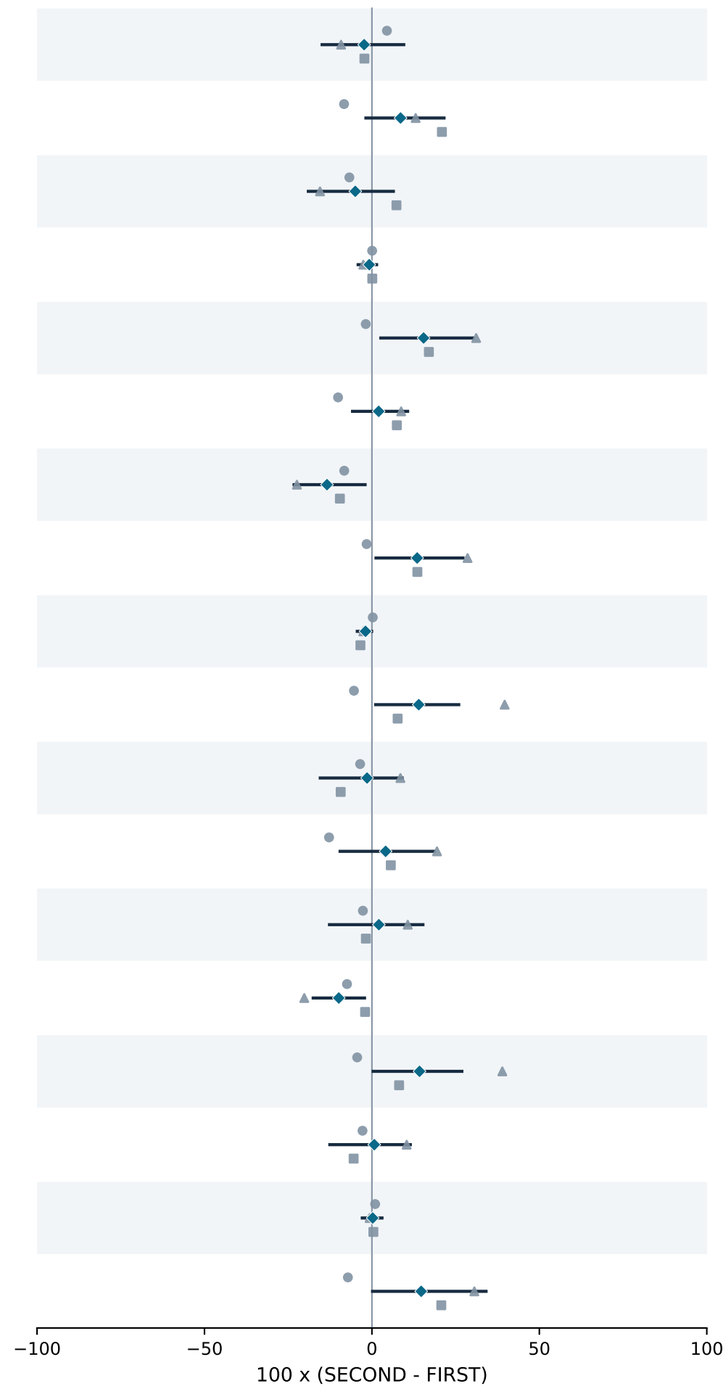

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

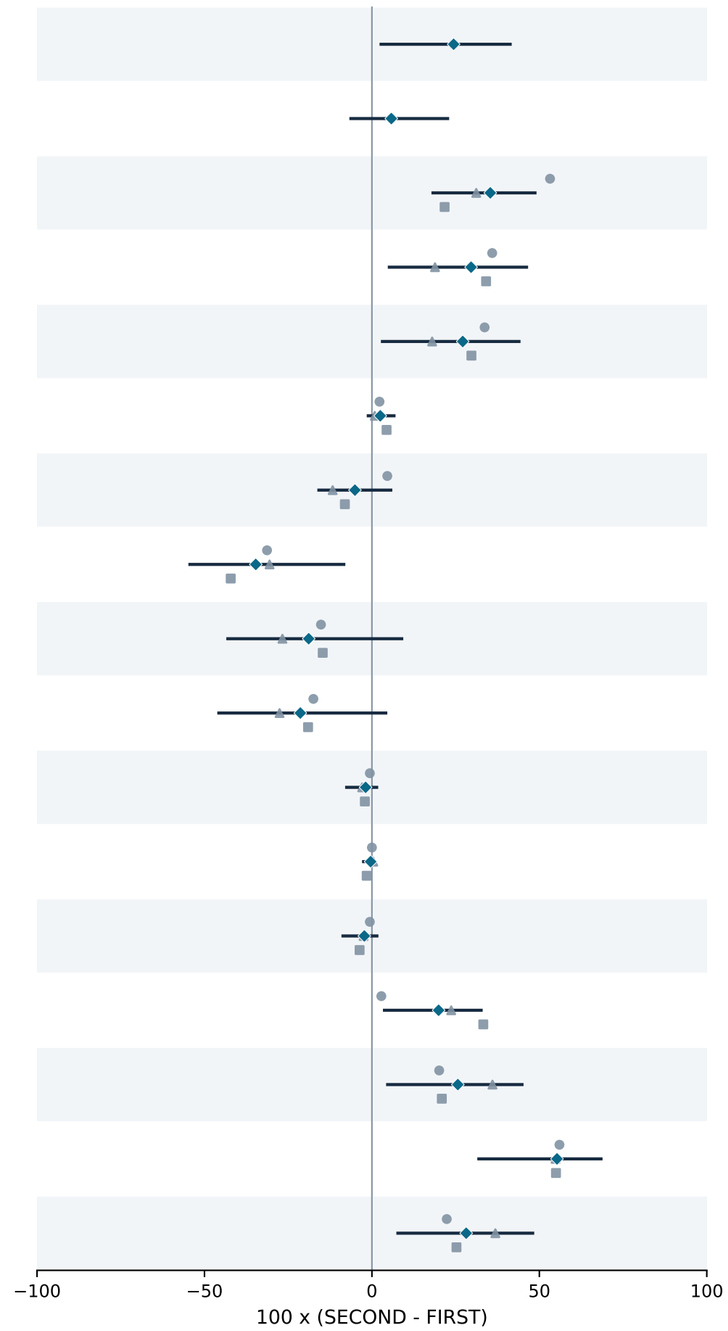

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Source-threshold recall

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Source-threshold review rate

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

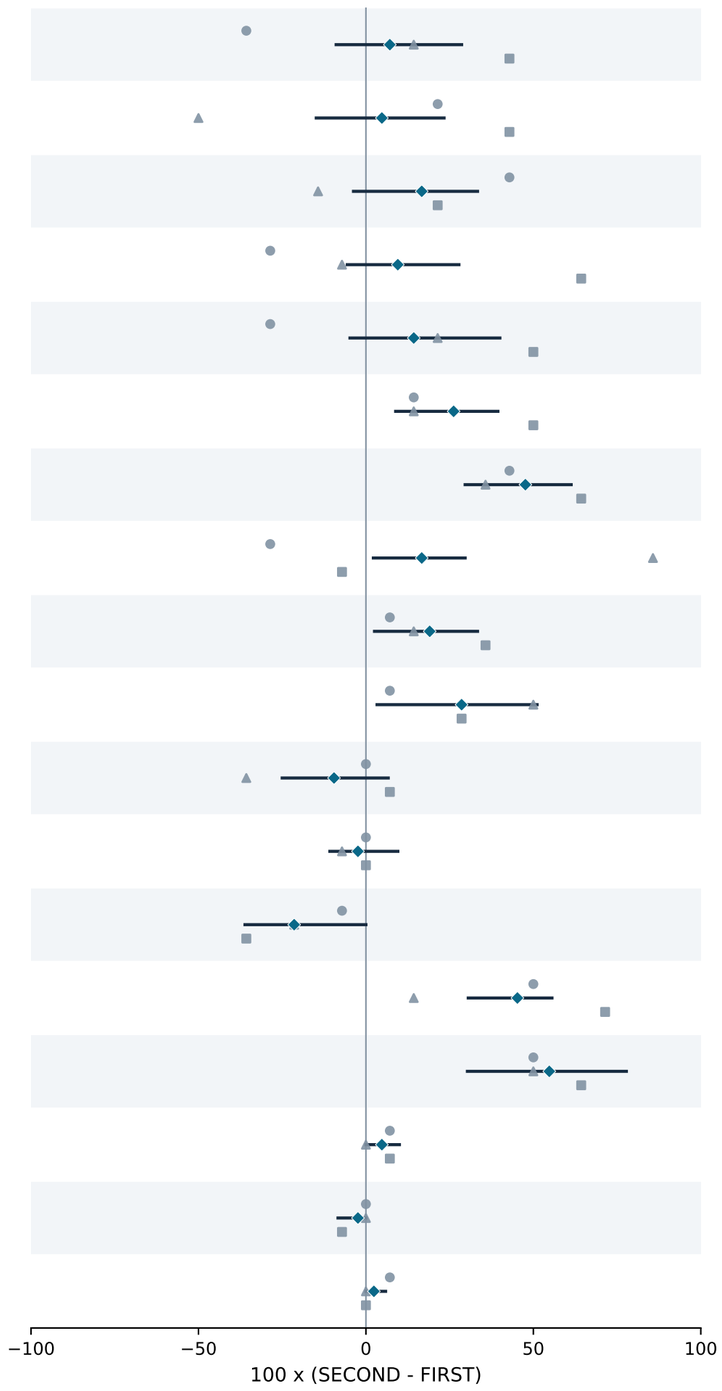

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Positive-image Dice

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

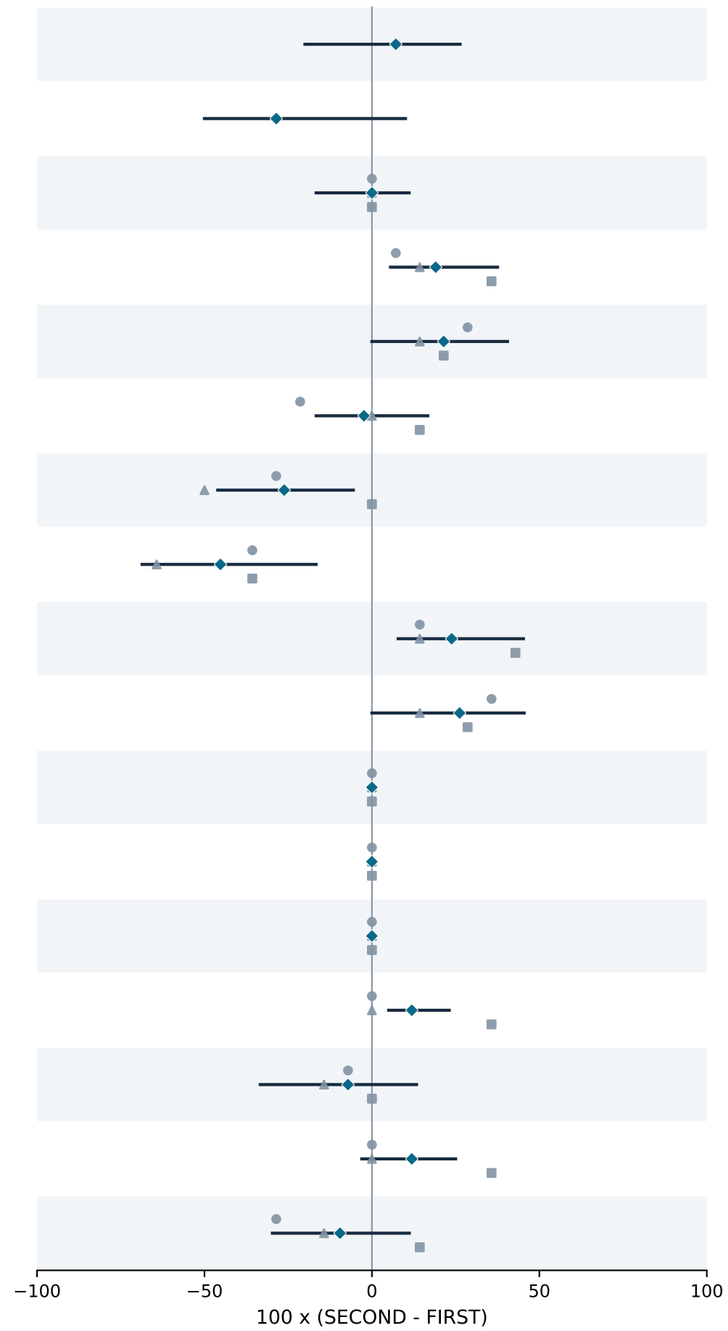

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

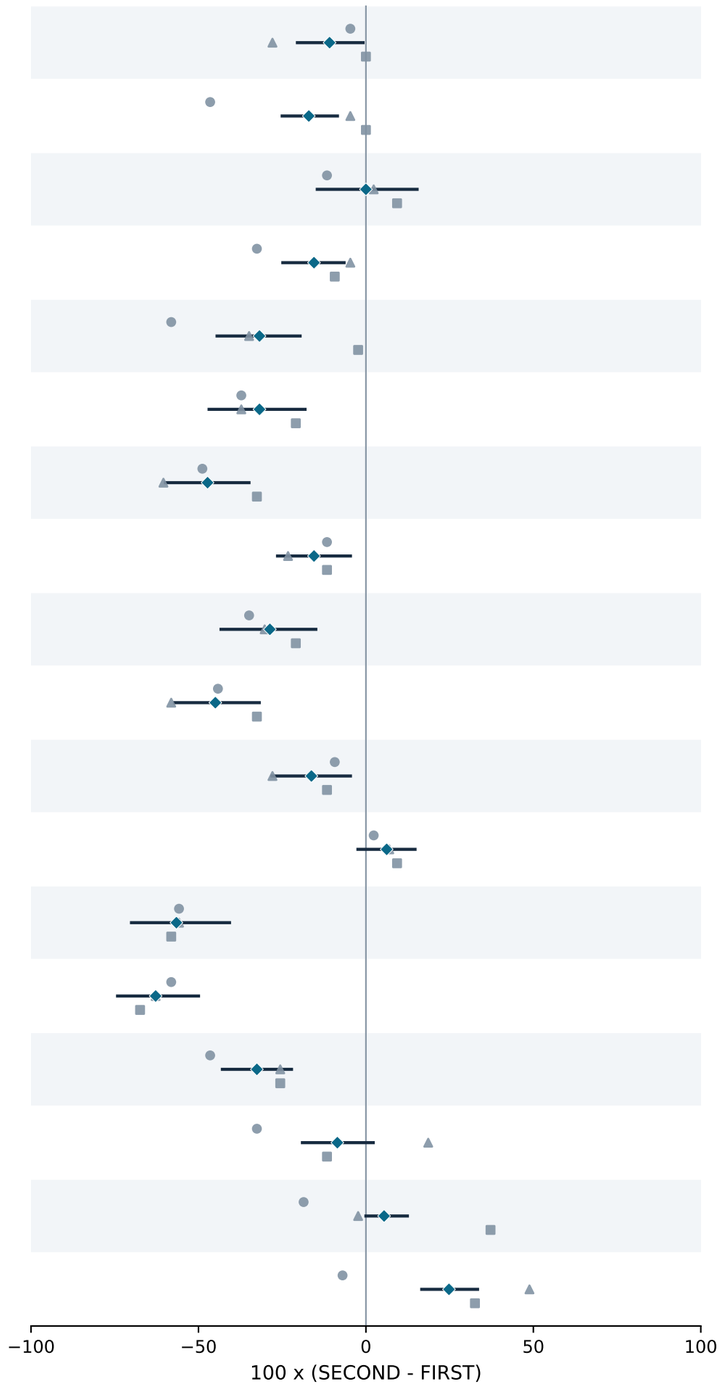

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Image AP

SCDD117 | Primary stratum: whole | Atlas page 168

Frozen declaration order. Symbols show literal signed differences; their colors do not identify a superior system.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

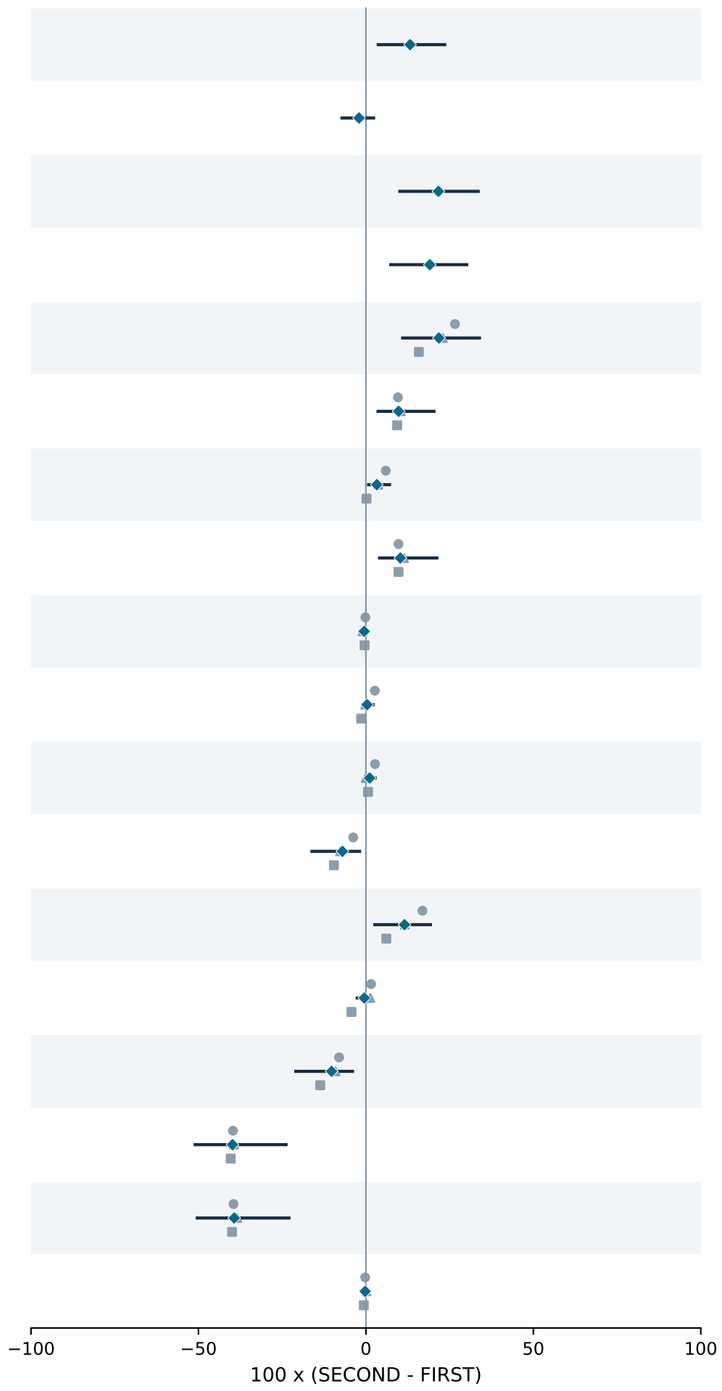

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

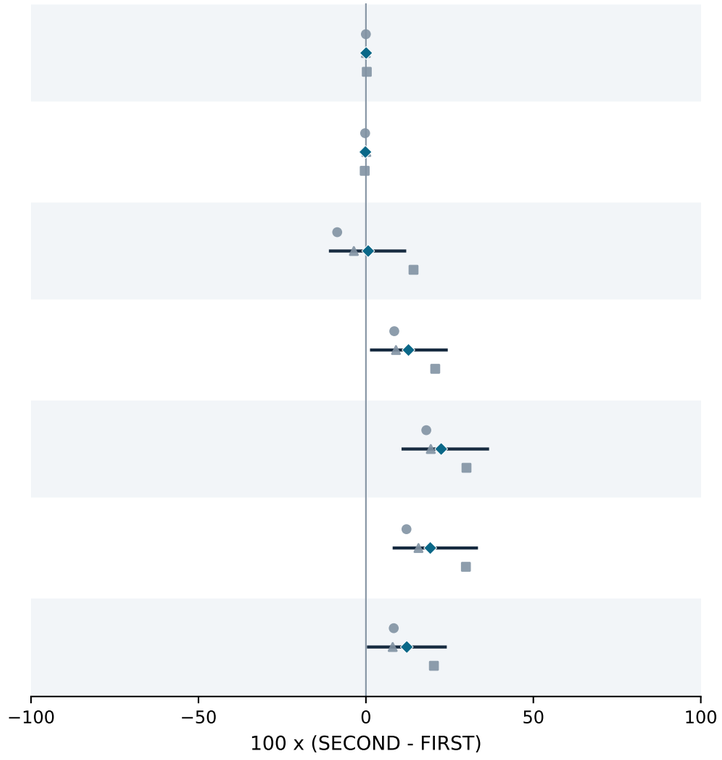

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
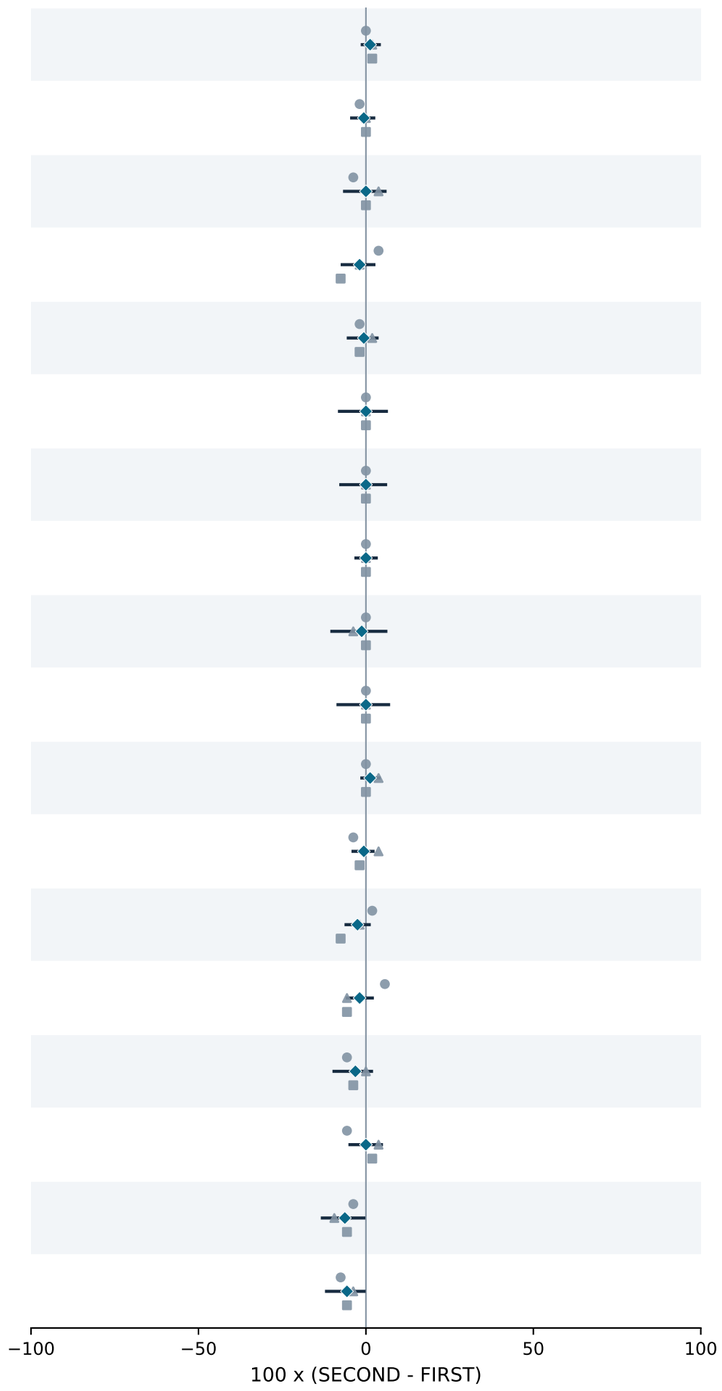

All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

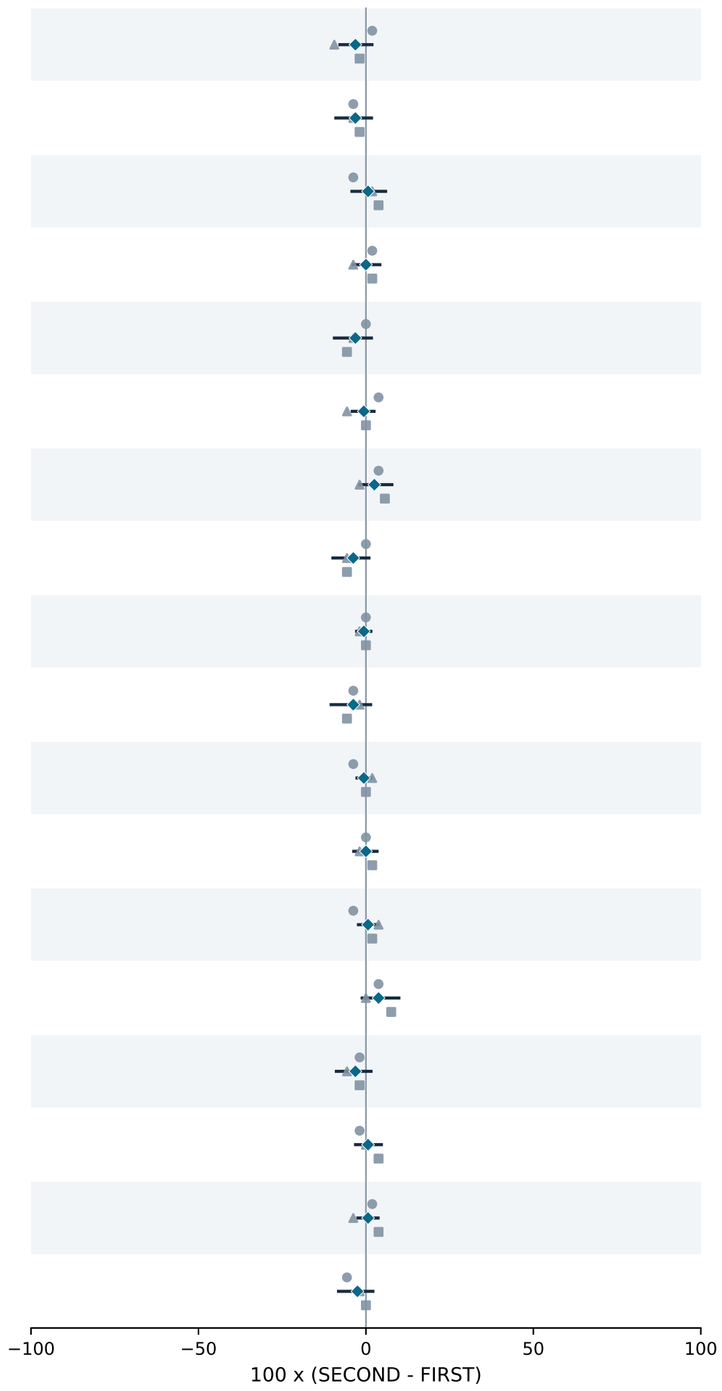

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

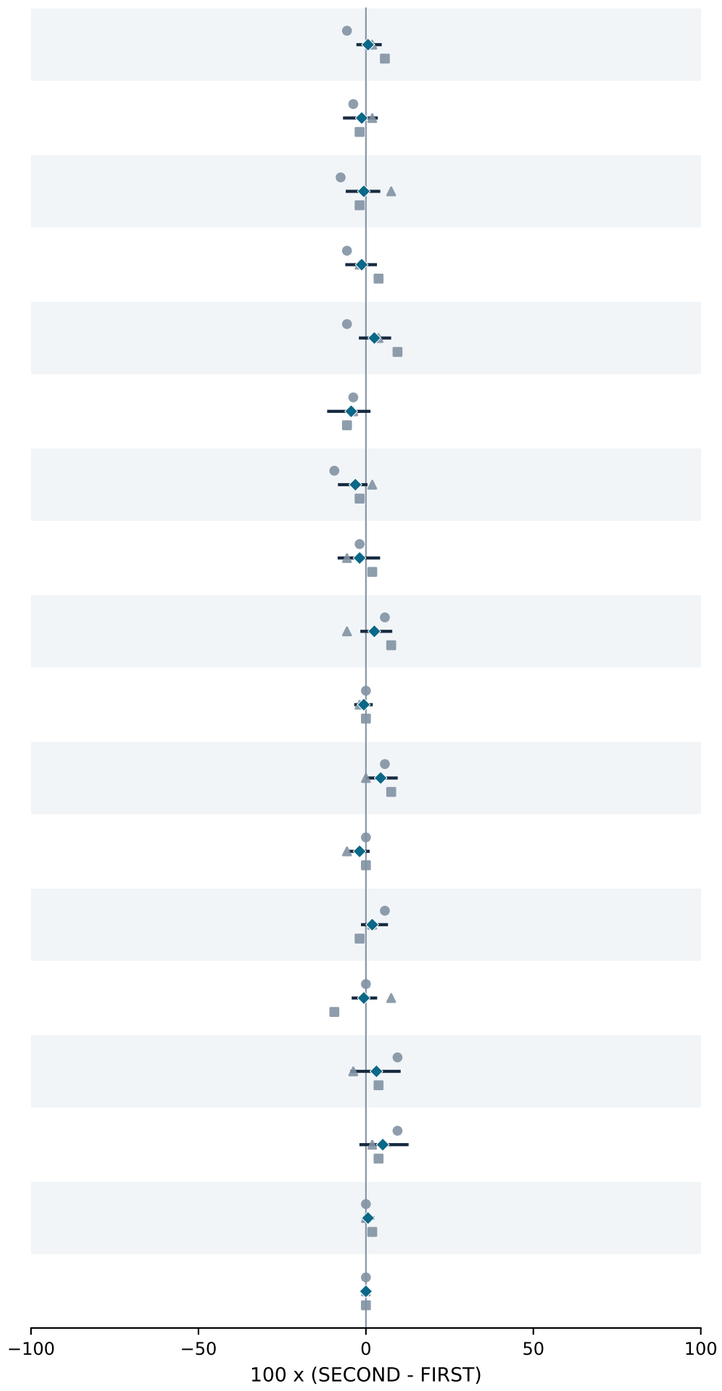

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

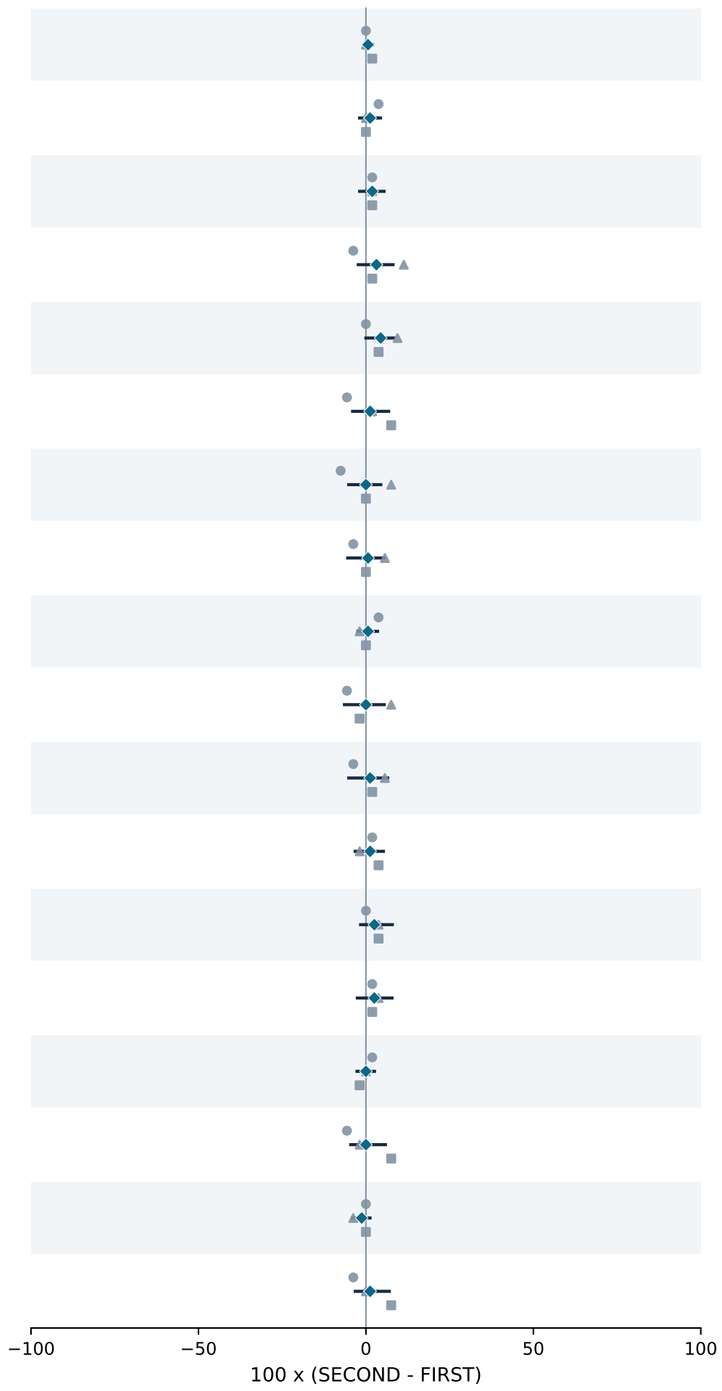

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

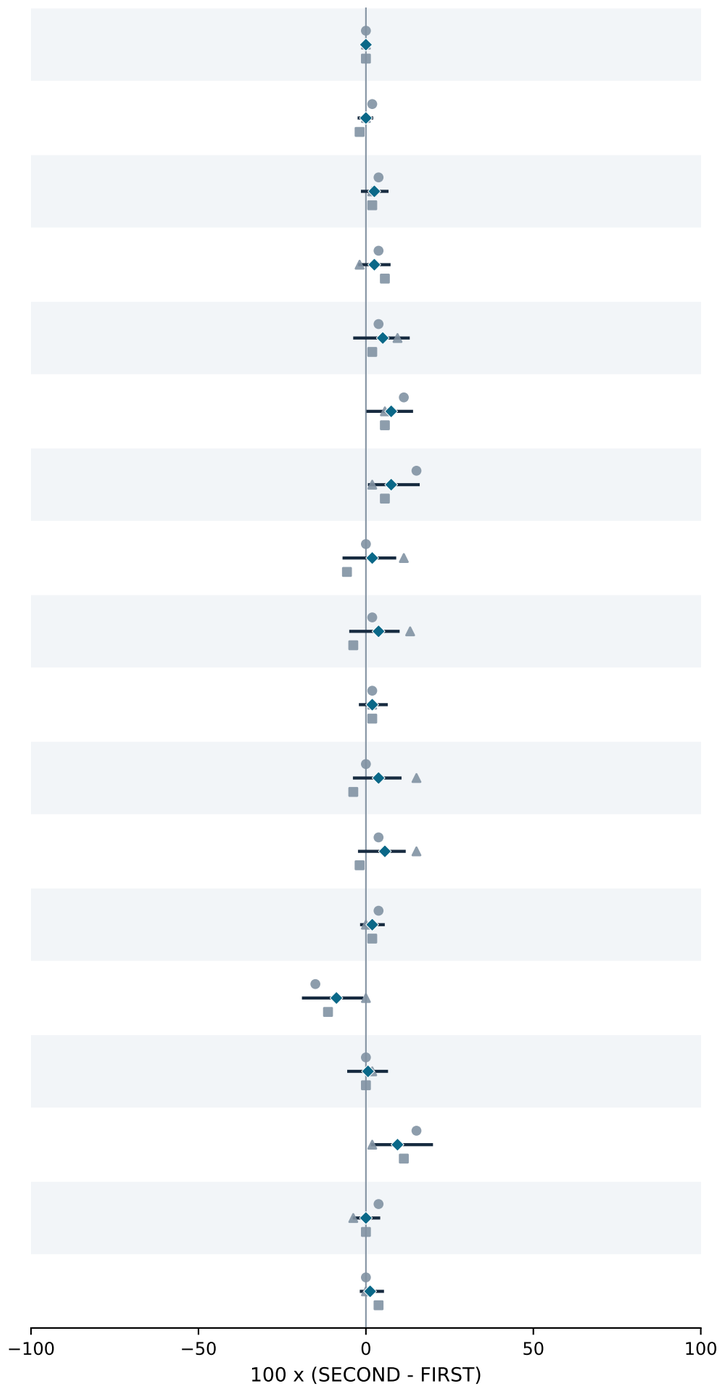

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Whole-cohort pooled pixel AP

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

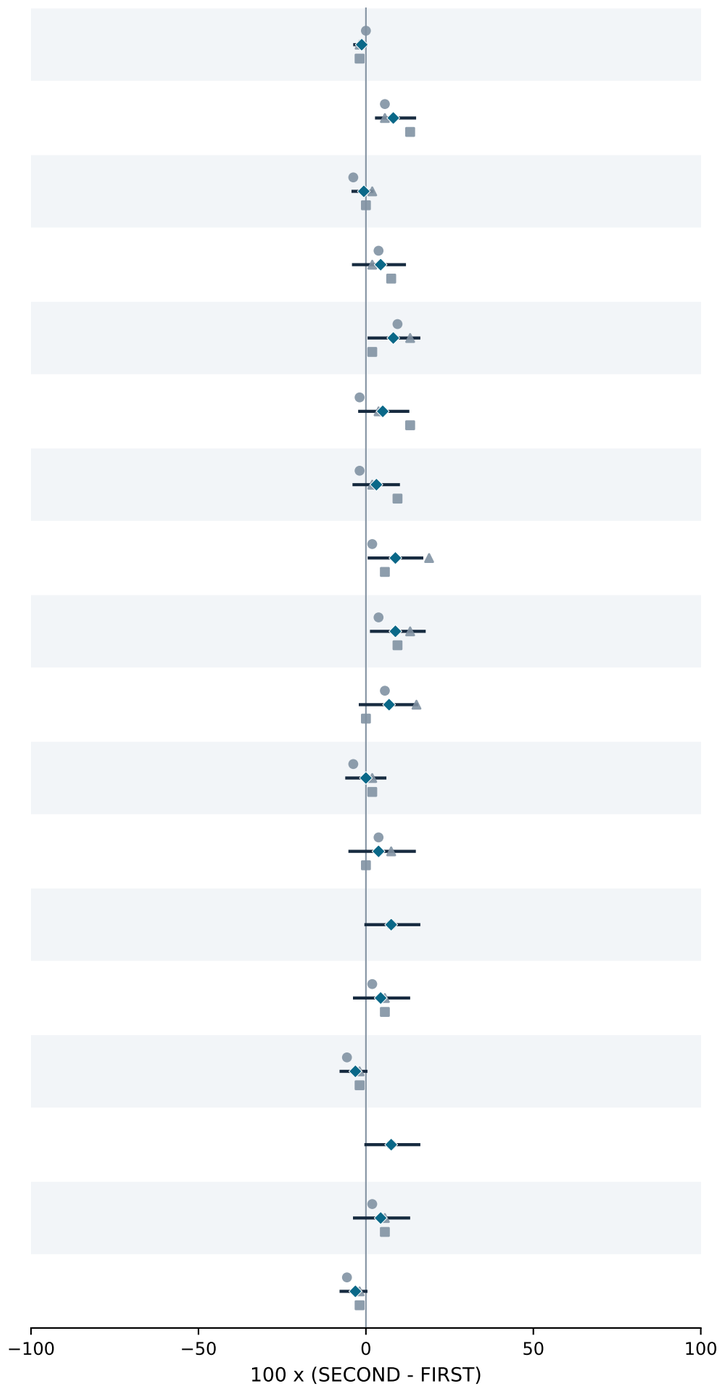

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Known-crack recall

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Known-crack recall

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

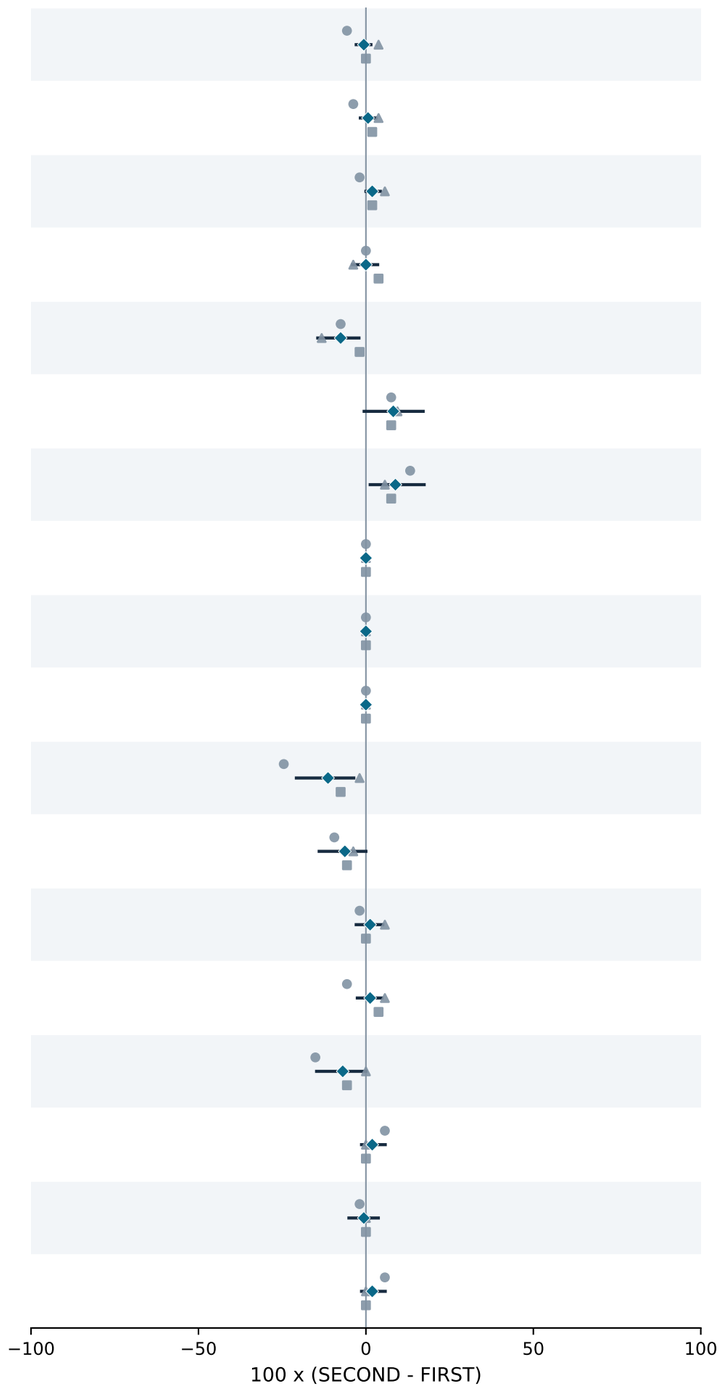

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Author-normal FPR

PVEL primary12292 (scored12326) | Primary stratum: whole | Atlas page 278

Frozen declaration order. Symbols show literal signed differences; their colors do not identify a superior system.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

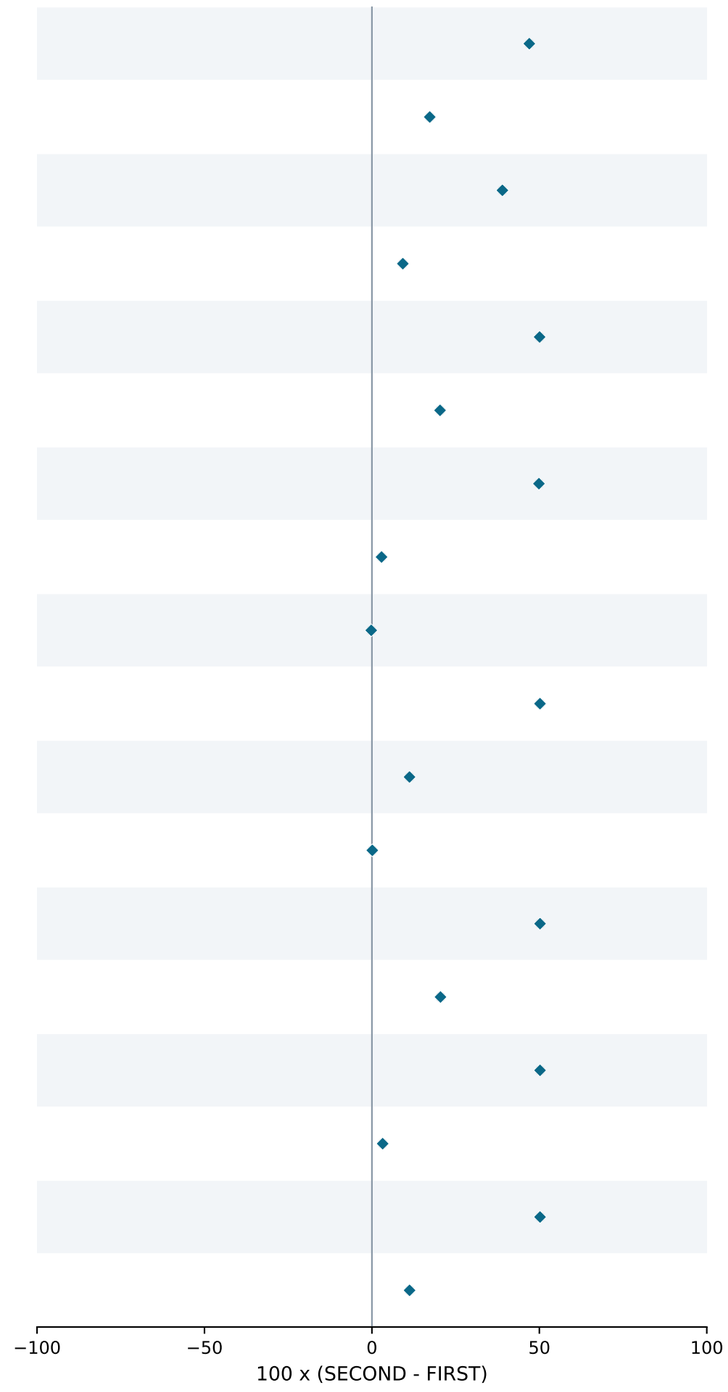

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

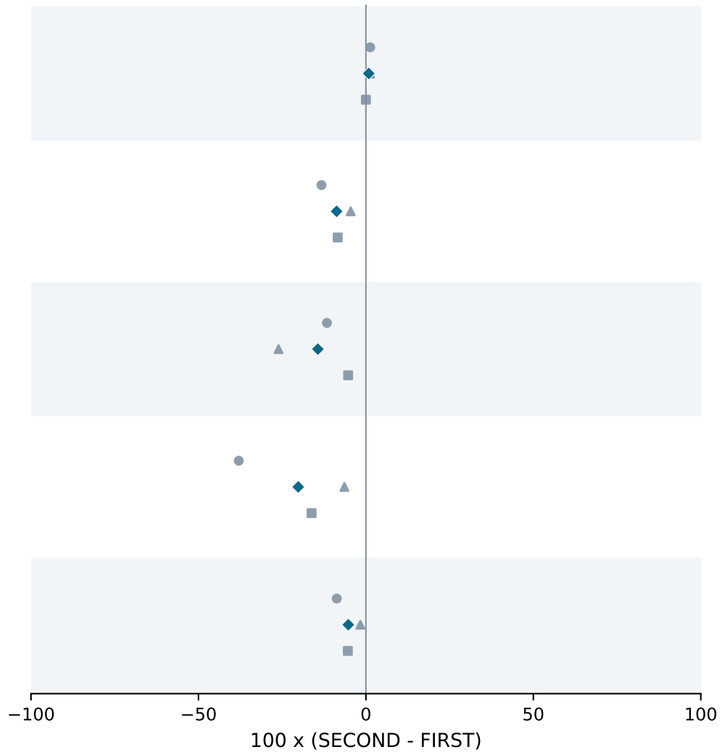

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
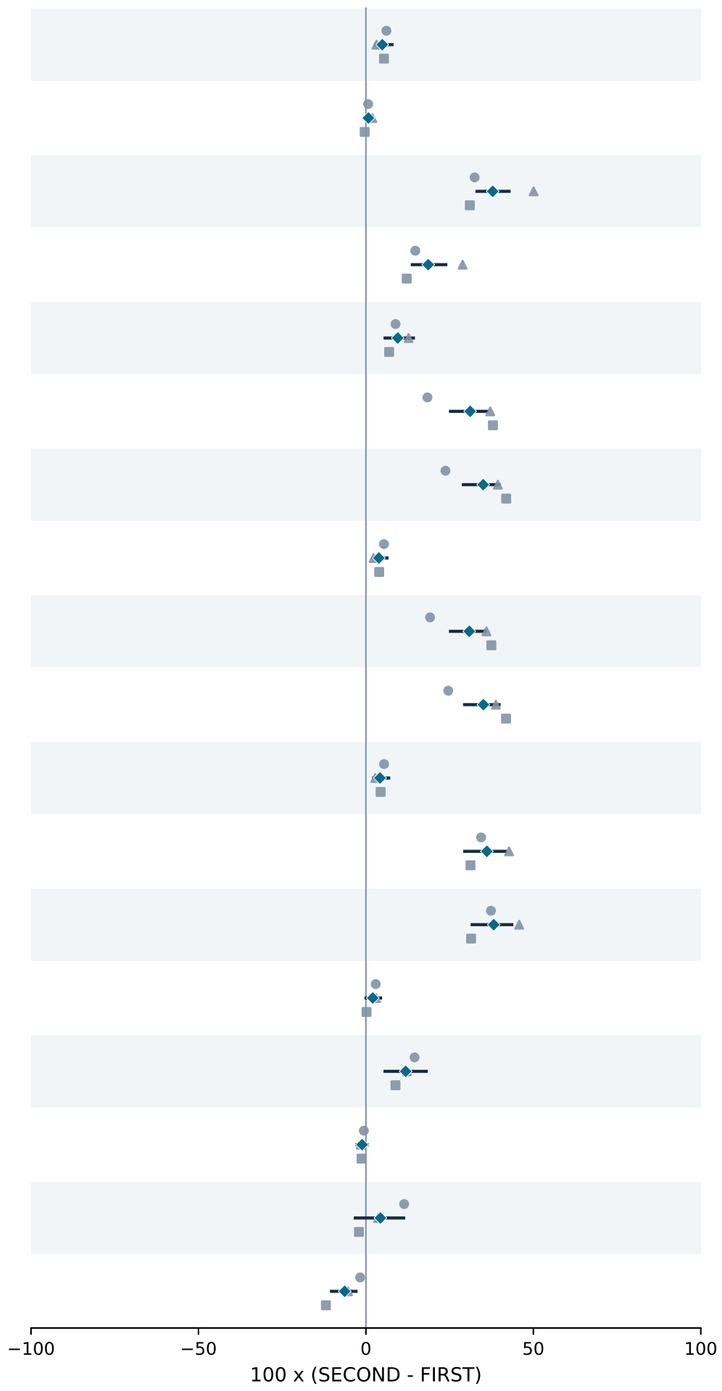

All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

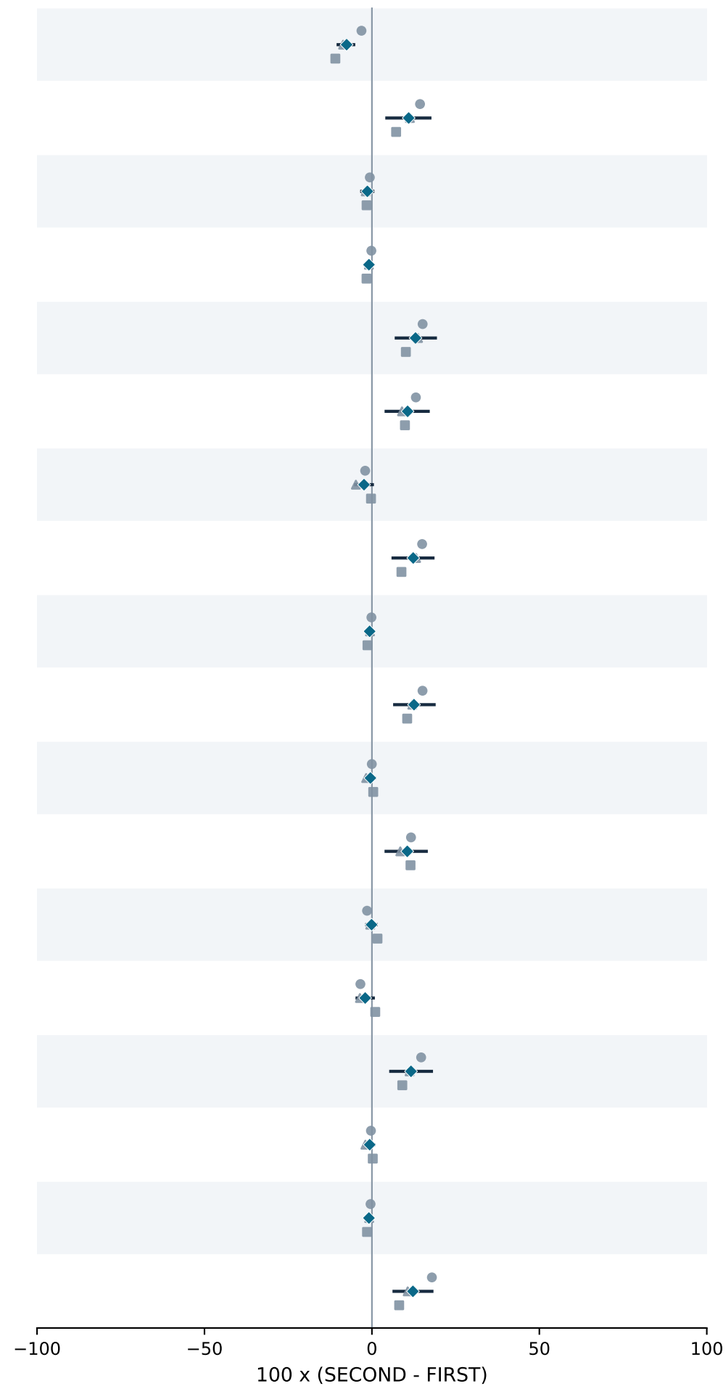

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

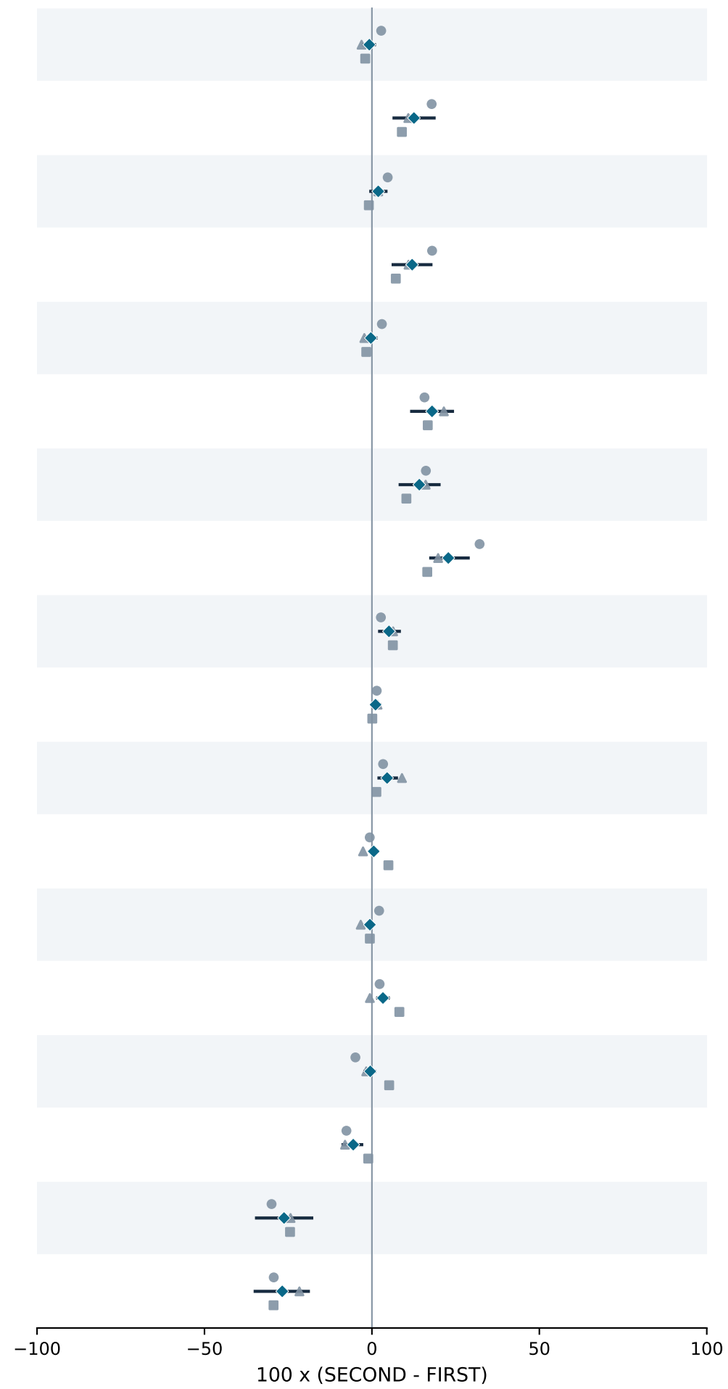

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

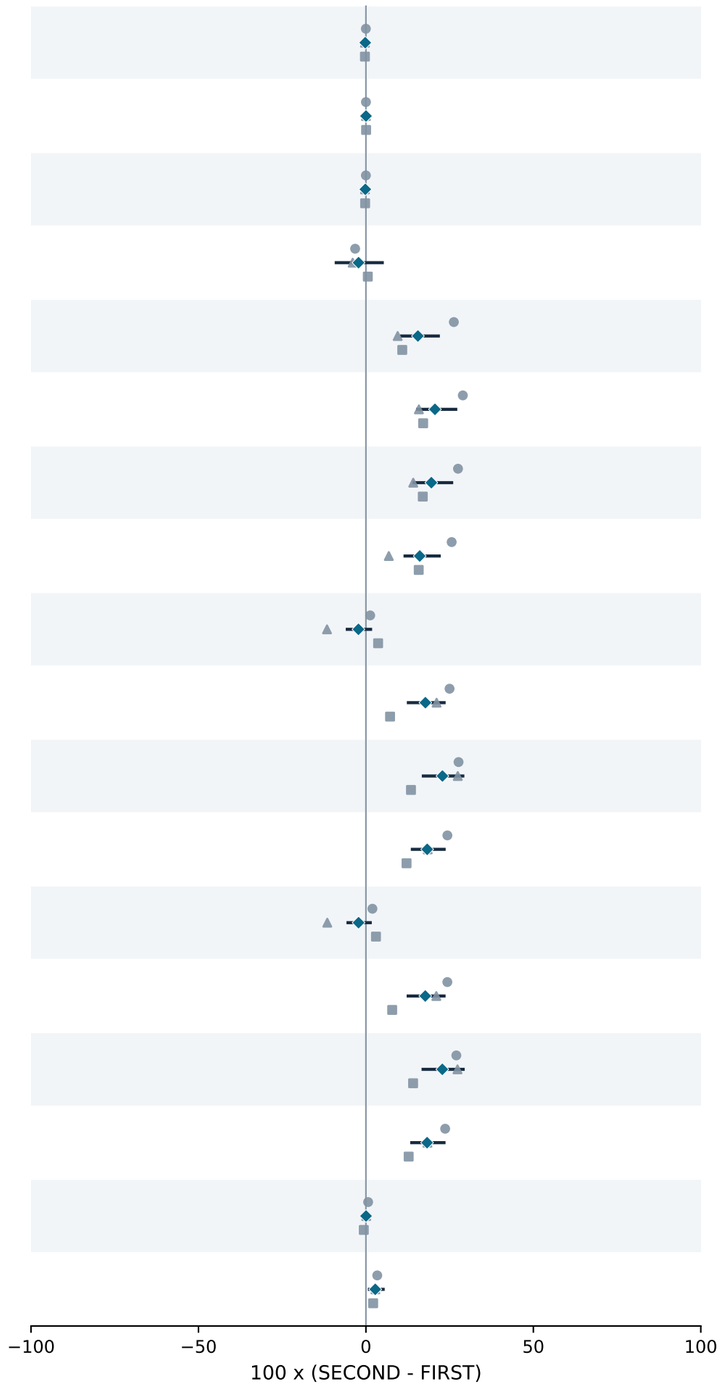

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

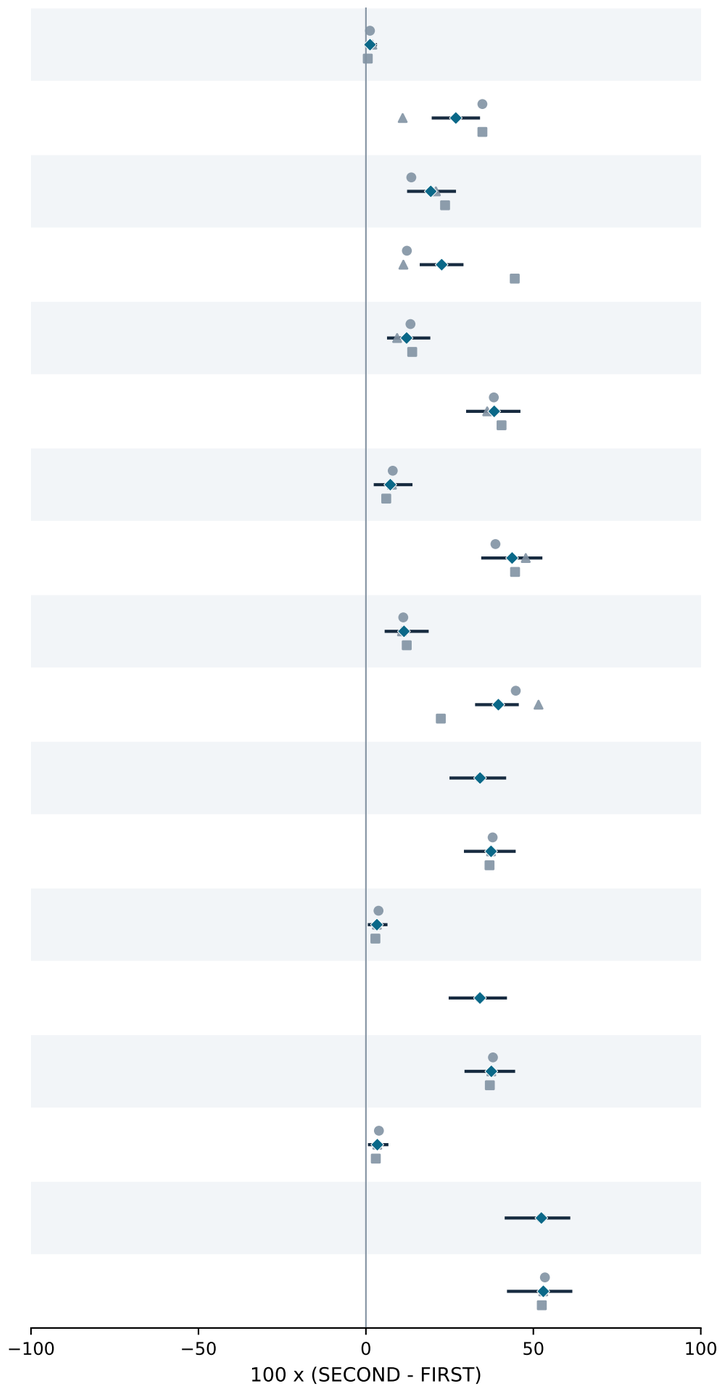

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

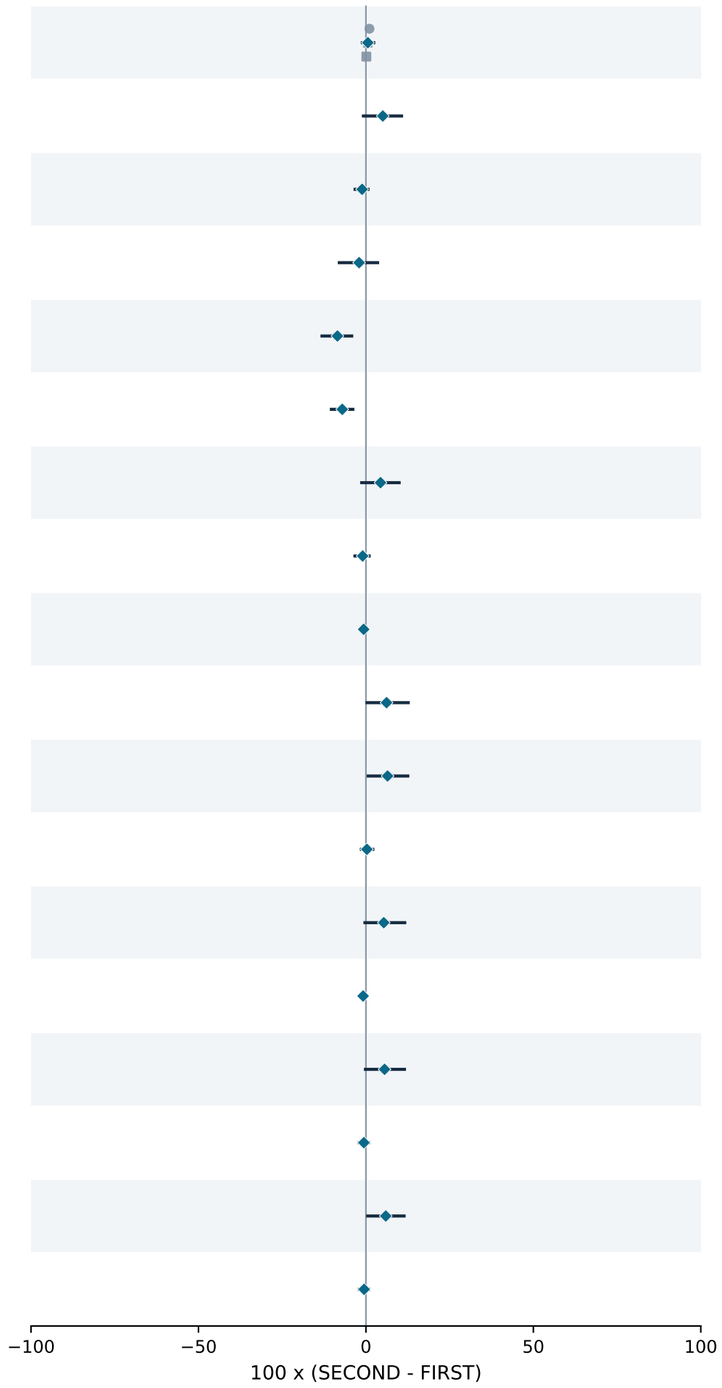

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

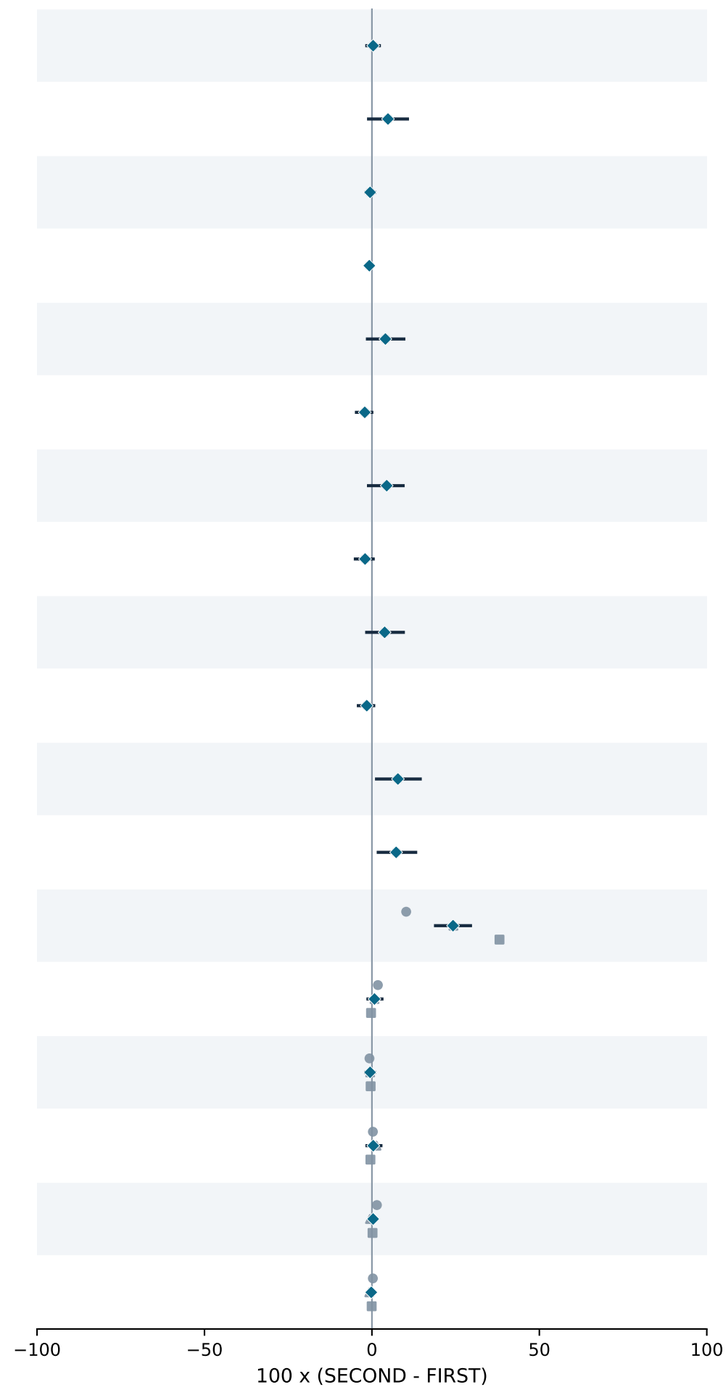

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

UCF507 | Primary stratum: whole | Atlas page 344

Frozen declaration order. Symbols show literal signed differences; their colors do not identify a superior system.

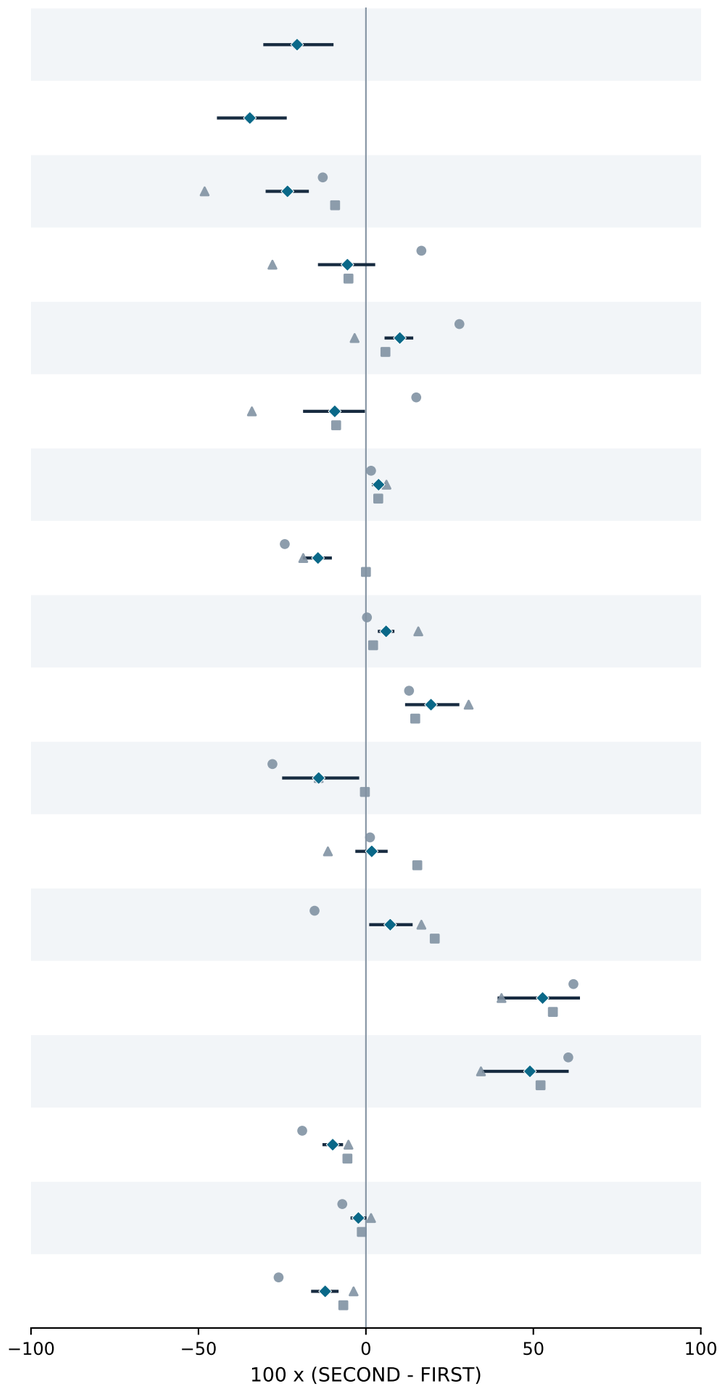

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

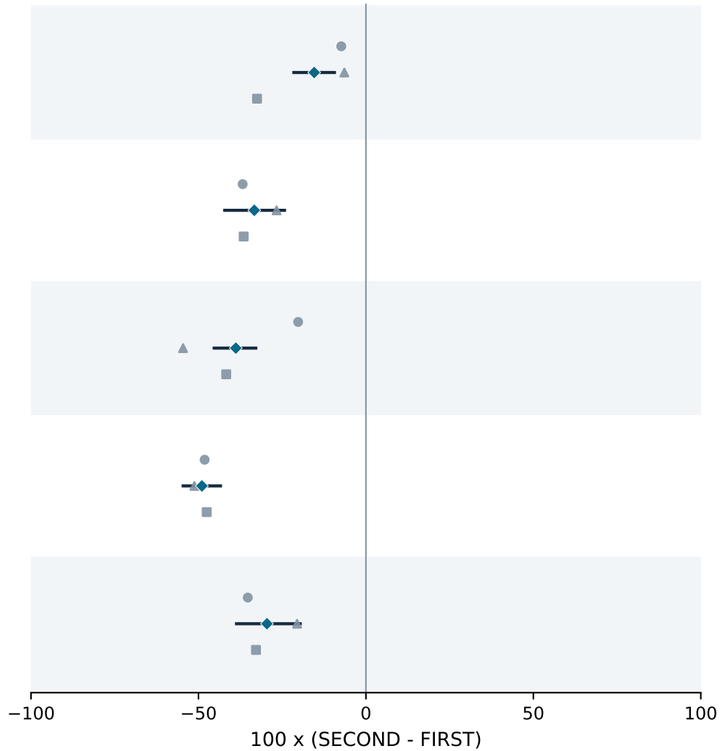

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.

Original conditional 95% interval (unadjusted) ◆ Mean of fitted-pair differences ● Every original fitted pair

Values and differences are multiplied by 100 for display only. Rate differences are percentage points; AUROC/AP/Dice/IoU remain score differences.
Intervals condition on these fitted systems and have no multiplicity adjustment. They do not represent uncertainty over new training runs or independent domains.
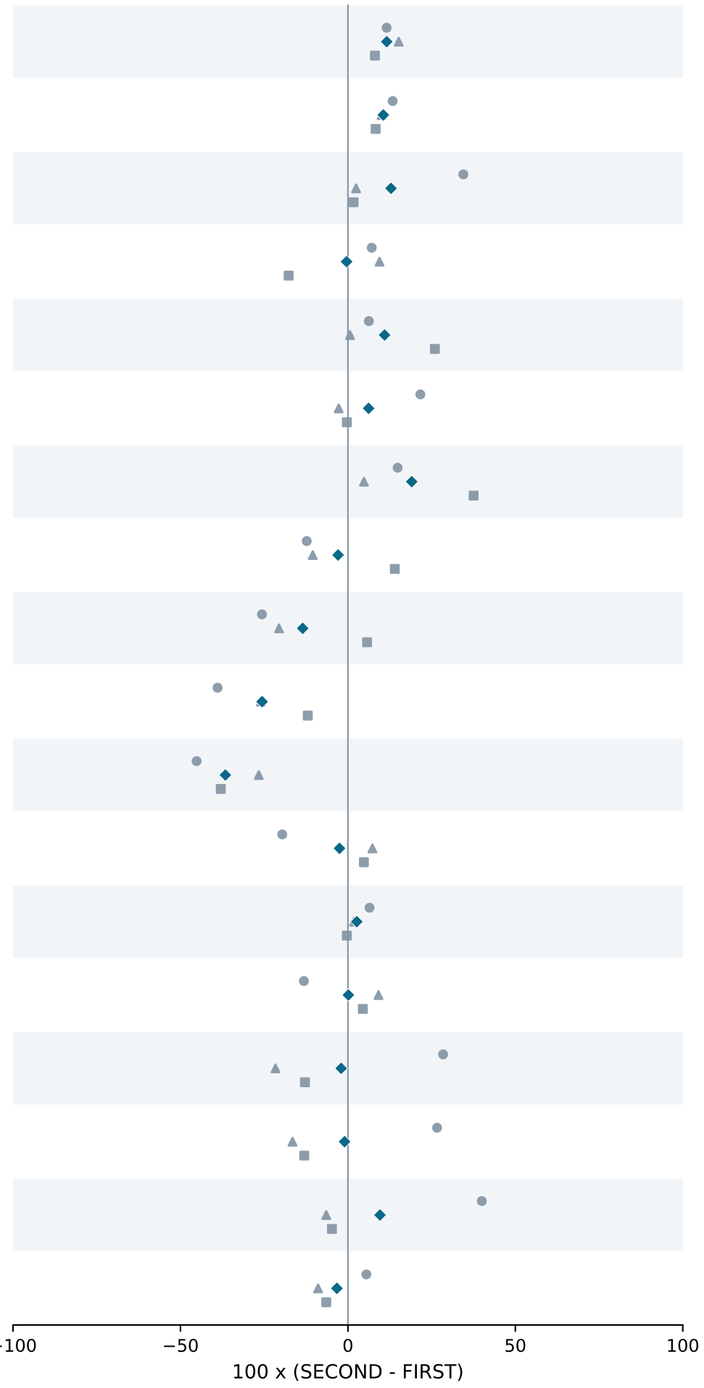

PVEL and whole-cohort pooled pixel AP have point estimates only. NA retains unsupported endpoints. A lower review/FPR rate must be considered together with recall.
All 6,212 frozen declarations appear once in this atlas. Correlated teacher/ensemble views and deterministic reuse remain disclosed in the companion ledgers.
