A Image AUROC

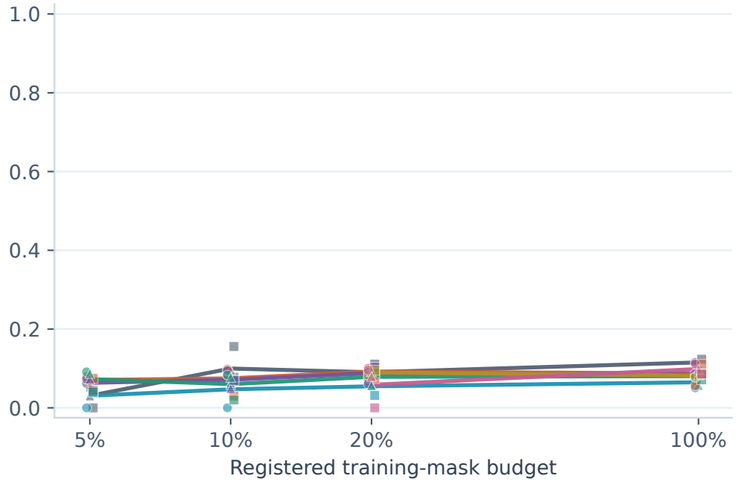

B Native pixel AP

C Crack-positive Dice

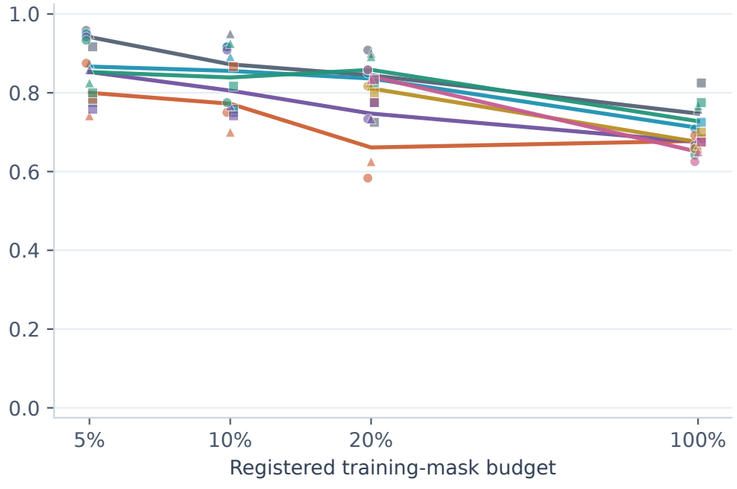

D Crack-positive IoU

E Image recall

F Review fraction

Lines: descriptive means of three fitted seeds. Circles / triangles / squares: seeds 11 / 22 / 33. No confidence bands.

5% uses 18 training masks PLUS 120 validation masks and upstream UCF labels. Reference ablations exist only at 20% and 100%.

Higher recall can require more review; higher image AUROC does not establish accurate crack overlap. Source development, not final confirmation.
